Economy to Grow at Pace Slightly Above Average in 2017, Say Chicago Fed Economic Outlook Symposium Participants

The 30th annual Economic Outlook Symposium, held in Chicago on December 2, drew participants from the manufacturing, banking, and auto industries, as well as academia and consulting and service firms. One session of the symposium presented the results from the consensus economic outlook. This year, 38 individuals provided a consensus outlook forecasts for major components of real gross domestic product (GDP), as well as several key statistics for the U.S. economy. The median forecast results are presented in the table. According to the symposium participants' median forecast for 2017, the nation's economic growth rate is expected to be slightly above its long-run average, the rate of inflation is predicted to increase, and the unemployment rate is forecasted to decrease slightly. The consensus outlook shows that the rate of real GDP growth is expected to be 1.8% this year and then 2.2% in 2017. Inflation, as measured by the Consumer Price Index, is predicted to average 1.4% this year and then 2.0% in 2017. The unemployment rate is forecasted to edge down to 4.8% by the end of next year.

Consumer spending is predicted to rise at a moderate pace next year, according to the consensus economic outlook. The pace of business spending is expected to rebound in 2017, after several years of weak growth. The housing sector is forecasted to continue its slow recovery next year. In particular, the consensus outlook shows housing starts are expected to increase to 1.15 million units this year and then rise further to 1.20 million units in 2017. Car and light truck sales are predicted to remain unchanged at 17.4 million units in 2016 and then move slightly lower to 17.3 million units in 2017. The average price of oil is expected to rise to \$47.93 per barrel in the final quarter of this year and then move up to \$51.53 per barrel by the end of 2017. Industrial production is forecasted to be virtually unchanged in 2016 and then rise by 1.9% next year—below the long-run average rate. The short-term interest rate (one-year Treasury rate) is expected to rise 62 basis points

during 2017, and the long-term interest rate (ten-year Treasury rate) is predicted to increase 46 basis points over the same period. The trade-weighted U.S. dollar is expected to increase 4.7% in 2017.

A summary of the 30th annual Economic Outlook Symposium will be published in an upcoming issue of *Chicago Fed Letter*.
