What is the National Activity Index?
The index is a weighted average of 85 indicators of growth in national economic activity drawn from four broad categories of data: 1) production and income; 2) employment, unemployment, and hours; 3) personal consumption and housing; and 4) sales, orders, and inventories.

Why are there three index values?
Each month, we provide a monthly index (the CFNAI), its three-month moving average, and a diffusion index. Month-to-month movements can be volatile, so the monthly index’s three-month moving average, the CFNAI-MA3, provides a more consistent picture of national economic growth. The CFNAI Diffusion Index instead captures the degree to which a change in the monthly index is spread out among its 85 indicators, averaged over a three-month period.

What do the numbers mean?
A zero value for the monthly index has been associated with the national economy expanding at its historical trend (average) rate of growth; negative values with below-average growth (in standard deviation units); and positive values with above-average growth.

Periods of economic expansion have historically been associated with values of the CFNAI-MA3 above –0.70 and the CFNAI Diffusion Index above –0.35. Conversely, periods of economic contraction have historically been associated with values of the CFNAI-MA3 below –0.70 and the CFNAI Diffusion Index below –0.35.

An increasing likelihood of a period of sustained increasing inflation has historically been associated with values of the CFNAI-MA3 above +0.70 more than two years into an economic expansion. Similarly, a substantial likelihood of a period of sustained increasing inflation has historically been associated with values of the CFNAI-MA3 above +1.00 more than two years into an economic expansion.

The next CFNAI will be released:
May 23, 2022
8:30 am Eastern Time
7:30 am Central Time

OF CHICAGO
Production-related indicators contributed +0.27 to the CFNAI in March, down slightly from +0.30 in February. Manufacturing industrial production moved up 0.9 percent in March after increasing 1.2 percent in February. The contribution of the sales, orders, and inventories category to the CFNAI moved up to +0.06 in March from –0.03 in the previous month.

Employment-related indicators contributed +0.16 to the CFNAI in March, down from +0.31 in February. Nonfarm payrolls increased by 431,000 in March after rising by 750,000 in February. The contribution of the personal consumption and housing category to the CFNAI was unchanged at –0.04 in March.

The CFNAI was constructed using data available as of April 21, 2022. At that time, March data for 51 of the 85 indicators had been published. For all missing data, estimates were used in constructing the index. The February monthly index value was revised to +0.54 from an initial estimate of +0.51, and the January monthly index value was revised to +0.75 from last month’s estimate of +0.59. Revisions to the monthly index can be attributed to two main factors: revisions in previously published data and differences between the estimates of previously unavailable data and subsequently published data. The revision to the February monthly index value was primarily due to the former, while the revision to the January monthly index value was primarily due to the latter.
