What is the Midwest Economy Index?

The index is a weighted average of 129 state and regional indicators encompassing the entirety of the five states in the Seventh Federal Reserve District (Illinois, Indiana, Iowa, Michigan, and Wisconsin). The index measures growth in nonfarm business activity based on indicators of four broad sectors of the Midwest economy: 1) manufacturing, 2) construction and mining, 3) services, and 4) consumer spending.

Why are there two index values?

Over long periods, growth in Midwest economic activity has tended to coincide with growth in national economic activity. However, over shorter periods of time this has not always been the case. To highlight such differences, we construct two separate index values. The MEI captures both national and regional factors driving Midwest growth, and the relative MEI provides a picture of Midwest growth conditions relative to those of the nation.

What do the index numbers mean?

A zero value for the MEI indicates that the Midwest economy is expanding at its historical trend rate of growth; positive values indicate above-average growth; and negative values indicate below-average growth. A zero value for the relative MEI indicates that the Midwest economy is growing at a rate historically consistent with the growth of the national economy; positive values indicate above-average relative growth; and negative values indicate below-average relative growth.

The next MEI will be released: July 31, 2015 8:30 am Eastern Time 7:30 am Central Time

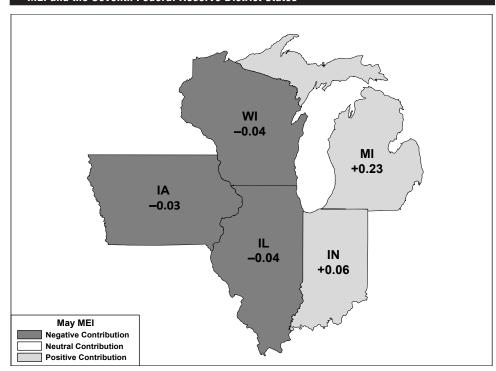

FEDERAL RESERVE BANK OF CHICAGO

Midwest Economy Index

Index shows Midwest economic growth decreased slightly in May

Led by a slight decrease in service sector growth, the Midwest Economy Index (MEI) moved down to +0.17 in May from +0.28 in April. The relative MEI fell to +0.55 in May from +0.86 in April. May's value for the relative MEI indicates that Midwest economic growth was somewhat higher than would typically be suggested by the growth rate of the national economy.

MEI and the Seventh Federal Reserve District States

Note: The map's shading summarizes the most recent contribution to growth in Midwest economic activity from each of the five states in the Seventh Federal Reserve District (Illinois, Indiana, Iowa, Michigan, and Wisconsin).

Sectoral and Geographic Contributions to the MEI and Relative MEI

May 2015

MEI

	Illinois	Indiana	Iowa	Michigan	Wisconsin	Regional	
Manufacturing	-0.05	+0.01	-0.05	+0.14	0.00	-0.01	+0.04
Construction	0.00	-0.01	+0.01	+0.01	-0.05	0.00	-0.05
Services	+0.01	+0.04	-0.02	+0.05	-0.01	0.00	+0.07
Consumer	0.00	+0.02	+0.03	+0.03	+0.02	+0.01	+0.11
	-0.04	+0.06	-0.03	+0.23	-0.04	-0.01	+0.17

Relative MEI

	Illinois	Indiana	Iowa	Michigan	Wisconsin	Regional	
Manufacturing	-0.03	+0.02	0.00	+0.20	+0.02	+0.02	+0.23
Construction	+0.02	+0.01	+0.01	+0.04	-0.03	0.00	+0.06
Services	+0.03	+0.16	+0.02	+0.08	-0.01	0.00	+0.27
Consumer	-0.01	0.00	+0.01	+0.01	0.00	-0.02	-0.01
	+0.01	+0.18	+0.05	+0.33	-0.02	0.00	+0.55

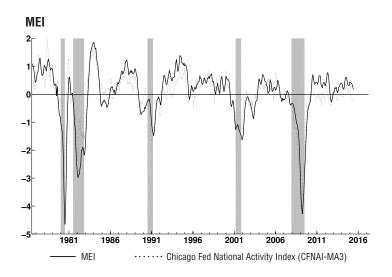

Notes: The table summarizes the most recent contribution to the MEI and relative MEI by sector and geography. The sectoral (rows) and geographic (columns) contributions may not sum to the index in each time period because of rounding. Manufacturing and construction and mining are composed of production and employment indicators. Services contains only employment indicators, while consumer spending contains employment, unemployment, per capita personal income, and home and retail sales indicators

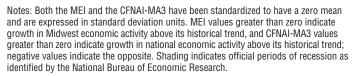

Manufacturing's contribution to the MEI ticked up to +0.04 in May from +0.03 in April. The pace of manufacturing activity increased in Michigan, but decreased in Iowa and Wisconsin and was unchanged in Illinois and Indiana. Manufacturing's contribution to the relative MEI decreased to +0.23 in May from +0.29 in April.

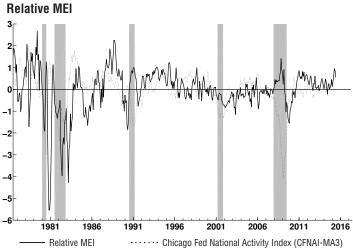

The construction and mining sector contributed -0.05 to the MEI in May, down slightly from -0.02 in April. The pace of construction and mining activity was lower in Michigan and Wisconsin, but higher in Indiana and Iowa and unchanged in Illinois. Construction and mining's contribution to the relative MEI decreased to +0.06 in May from +0.11 in April.

The service sector contributed +0.07 to the MEI in May, down from +0.15 in April. The pace of service sector activity decreased in Illinois, Iowa, and Wisconsin, but increased in Indiana and Michigan. The service sector's contribution to the relative MEI fell to +0.27 in May from +0.42 in April.

The contribution from consumer spending indicators was unchanged at +0.11 in May. Consumer spending indicators were, on balance, up in Indiana, but down in Michigan and Wisconsin and steady in Illinois and Iowa. Consumer spending's contribution to the relative MEI decreased to -0.01 in May from +0.05 in April.

Notes: Both the relative MEI and the CFNAI-MA3 have been standardized to have a zero mean and are expressed in standard deviation units. The relative MEI is constructed from the standardized residuals from linear regressions of each of the 129 MEI indicators on the CFNAI-MA3. Relative MEI values greater than zero indicate that growth in Midwest economic activity is higher on average than would typically be suggested based on the CFNAI-MA3; negative values indicate the opposite. Shading indicates official periods of recession as identified by the National Bureau of Economic Research.

2015 MEI Release Dates

GSP Growth Forecasts throug	Monthly Data for	Date of Release
	June 2015	July 31, 2015
