Lessons learned from the financial crisis and Great Recession: Building a better measurement toolkit

J. Steven Landefeld, Director
September 26, 2013
What Did We Miss During the Great Recession?
Why it’s important

- Monetary policy
- Fiscal policy
- Allocation of funds
- State and Local planning and allocation of funds
- Business uses
- Household uses
- Research
Table 1. Economic projections of Federal Reserve Board members and Federal Reserve Bank presidents, December 2012

<tr>
<td>September projection</td>
<td>1.7 to 1.9</td>
<td>1.7 to 2.0</td>
</tr>
</tbody>
</table>

Note: Projections of change in real gross domestic product (GDP) and projections for both measures of inflation are from the fourth quarter of the previous year to the fourth quarter of the year indicated. PCE inflation and core PCE inflation are the percentage rates of change in, respectively, the price index for personal consumption expenditures (PCE) and the price index for PCE excluding food and energy. Projections for the unemployment rate are for the average civilian unemployment rate in the fourth quarter of the year indicated. Each participant’s projections are based on his or her assessment of appropriate monetary policy. Longer-run projections represent each participant’s assessment of the rate to which each variable would be expected to converge under appropriate monetary policy and in the absence of further shocks to the economy. The September projections were made in conjunction with the meeting of the Federal Open Market Committee on September 12-13, 2012.

1. The central tendency excludes the three highest and three lowest projections for each variable in each year.
2. The range for a variable in a given year includes all participants’ projections, from lowest to highest, for that variable in that year.
3. Longer-run projections for core PCE inflation are not collected.

Partnerships with business respondents, owners of “big” data, and data users:
- Improving estimates and survey efficiency, accuracy, timeliness, and relevance, while reducing respondent burden.
- Benchmarking, weighting, and extrapolating using big data.

Production and IT Efficiencies

Prioritization
Broad Based Priorities for Fact-Based Policy

- Financial regulation
- Immigration
- Manufacturing
- Health care
- Taxes and small business
- Competitiveness
- Innovation
- Skill gaps
Help With Detailed Priorities

- Funding critical updates through efficiencies and programmatic cuts
  - Criteria:
    - GDP or feed into GDP
    - Required by law
    - Required for the administration of Federal Law
  - Major Programmatic Reductions:
    - RIMS
    - Detailed statistics on Local Area Personal Income
    - FDI Analytical Products
    - Delay or loss of source data (BLS & Census)
New Products

- R&D and Intellectual Property
- Accrual-based Pensions
- Quarterly Integrated FRB-BEA Accounts, International Investment Position
- Quarterly GDP by Industry
- Annual Integrated BLS-BEA Industry Level Production Accounts
- Distribution of income and spending
- Real State Personal Income & Prototype PCE by State
- Accelerated local area data
- Economic Sustainability Indicators
Examples of Newly Available: Inflation Adjusted Personal Income by RPPs
