The “Great Recession” ended in June 2009, but the economy expanded by just 2.1% over the past year.

GDP is forecast to grow near trend in 2012 and slightly above trend in 2013.

The forecast path of the current recovery is relatively muted compared with past deep recession recovery cycles.

Employment fell by over 8.7 million jobs between December 2007 and February 2010, but began to rise and has added 1.8 million jobs over the past 12 months.

After peaking in October 2009, the unemployment rate has fallen by 1.9 percentage points.
The unemployment rate is forecast to edge lower.

Inflation has risen.

In large part due to the movement of oil prices. However, adjusted for inflation, current oil prices are below the levels that existed thirty years ago.

Natural gas prices have fallen sharply.

Expenditures on energy are below the historical average.

Removing the volatile food and energy components from the PCE, “core” inflation remains contained.
Inflation is anticipated to rise 2.2 percent this year and next year. 

Industrial output in manufacturing fell quite sharply during the recession, but has risen strongly over the past thirty-three months, averaging 6.7% and has recovered 73.8% of the loss during the recession.

Manufacturing capacity utilization has been rising since June 2009.

Industrial production is forecast to rise at a solid pace.

Housing starts fell to a post WWII low.

The forecast calls for a very gradual recovery in housing.
Credit spreads between Corporate High Yield securities and Corporate Aaa securities have been edging lower.

Monetary policy has been very aggressive, keeping the Fed Funds near zero since December 2008.

The Federal Funds Rate is anticipated to remain very low over the forecast horizon.

The asset side of the Fed’s balance sheet has expanded in size and in composition.

The Fed’s expansion of the monetary base has allowed the money supply to continue rising, compared with what took place during the 1930s.

Summary

• The outlook is for the U.S. economy to expand at a pace below trend this year and slightly above trend in 2013
• Employment is expected to rise moderately with the unemployment rate edging lower
• Slackness in the economy will lead to a relatively contained inflation rate
• Growth in manufacturing output should be solid
