What is the National Activity Index?

The index is a weighted average of 85 indicators of national economic activity drawn from four broad categories of data: 1) production and income; 2) employment, unemployment, and hours; 3) personal consumption and housing; and 4) sales, orders, and inventories.

A zero value for the index indicates that the national economy is expanding at its historical trend rate of growth; negative values indicate below-average growth; and positive values indicate above-average growth.

Why are there three index values?

Each month, we provide a monthly index, its three-month moving average, and a diffusion index. Month-to-month movements can be volatile, so the monthly index's three-month moving average, the CFNAI-MA3, provides a more consistent picture of national economic growth. The CFNAI Diffusion Index captures the degree to which a change in the monthly index is spread out among its 85 indicators, averaged over a three-month period.

What do the numbers mean?

When the CFNAI-MA3 value moves below -0.70 following a period of economic expansion, there is an increasing likelihood that a recession has begun. Conversely, when the CFNAI-MA3 value moves above -0.70 following a period of economic contraction, there is an increasing likelihood that a recession has ended.

When the CFNAI-MA3 value moves above $+0.70$ more than two years into an economic expansion, there is an increasing likelihood that a period of sustained increasing inflation has begun.

The next CFNAI will be released:

January 22, 2016

Chicago Fed National Activity Index

Index shows economic growth slowed in November

Led by declines in production-related indicators, the Chicago Fed National Activity Index (CFNAI) moved down to -0.30 in November from -0.17 in October. Two of the four broad categories of indicators that make up the index decreased from October, and three of the four categories made negative contributions to the index in November.

The index's three-month moving average, CFNAI-MA3, decreased to -0.20 in November from -0.18 in October. November's CFNAI-MA3 suggests that growth in national economic activity was somewhat below its historical trend. The economic growth reflected in this level of the CFNAI-MA3 suggests subdued inflationary pressure from economic activity over the coming year.

The CFNAI Diffusion Index, which is also a three-month moving average, increased to -0.20 in November from -0.25 in October. Thirty-seven of the 85 individual indicators made positive contributions to the CFNAI in November, while 48 made negative contributions. Thirty-nine indicators improved from October to November, while 44 indicators deteriorated and two were unchanged. Of the indicators that improved, 16 made negative contributions.

Chicago Fed National Activity Index, by Categories, and CFNAI-MA3

CFNAI, CFNAI-MA3, and CFNAI Diffusion for the Latest Six Months and Year-Ago Month

| | Nov '15 | Oct '15 | Sep '15 | Aug '15 | Jul '15 | Jun '15 | Nov '14 |
|------------------------|---------|---------|---------|---------|---------|---------|---------|
| CFNAI | | | | | | | |
| Current | -0.30 | -0.17 | -0.13 | -0.24 | +0.50 | -0.04 | +0.77 |
| Previous | N/A | -0.04 | -0.29 | -0.29 | +0.49 | -0.04 | +0.76 |
| CFNAI-MA3 | | | | | | | |
| Current | -0.20 | -0.18 | +0.04 | +0.07 | +0.05 | -0.07 | +0.42 |
| Previous | N/A | -0.20 | -0.03 | +0.05 | +0.04 | -0.08 | +0.42 |
| CFNAI Diffusion | | | | | | | |
| Current | -0.20 | -0.25 | -0.05 | +0.02 | +0.09 | -0.03 | +0.36 |
| Previous | N/A | -0.18 | -0.07 | -0.01 | +0.06 | -0.04 | +0.36 |

Current and Previous values reflect index values as of the December 21, 2015, release and November 23, 2015, release, respectively. N/A indicates not applicable.

The contribution from production-related indicators to the CFNAI decreased to -0.27 in November from -0.11 in October. Industrial production declined by 0.6 percent in November after decreasing by 0.4 percent in October. Moreover, manufacturing production was unchanged in November, following an increase of 0.3 percent in the previous month.

Employment-related indicators contributed $+0.05$ to the CFNAI in November, down slightly from $+0.08$ in October. Nonfarm payrolls increased by 211,000 in November after rising by 298,000 in October, while the unemployment rate was unchanged at 5.0 percent in November.

The contribution of the personal consumption and housing category to the CFNAI edged up to -0.06 in November from -0.11 in October. Housing starts increased to 1,173,000 annualized units in November from 1,062,000 in October. In addition, housing permits moved up to 1,289,000 annualized units in November from 1,161,000 in the

previous month. The sales, orders, and inventories category made a contribution of -0.02 to the CFNAI in November, up slightly from -0.03 in October.

The CFNAI was constructed using data available as of December 17, 2015. At that time, November data for 51 of the 85 indicators had been published. For all missing data, estimates were used in constructing the index. The October monthly index value was revised to -0.17 from an initial estimate of -0.04 , and the September monthly index value was revised to -0.13 from last month's estimate of -0.29 . Revisions to the monthly index value can be attributed to two main factors: revisions in previously published data and differences between the estimates of previously unavailable data and subsequently published data. The revision to the October monthly index value was due primarily to the former, while the revision to the September monthly index value was due primarily to the latter.

CFNAI-MA3 and Inflation Cycles

Notes: Shading represents periods of substantial inflation increases. A CFNAI-MA3 value above $+0.70$ more than two years into an economic expansion indicates an increasing likelihood that a period of sustained increasing inflation has begun. A CFNAI-MA3 value above $+1.00$ more than two years into an economic expansion indicates a substantial likelihood that a period of sustained increasing inflation has begun.

CFNAI-MA3 and Business Cycles

Notes: Shading indicates official periods of recession as identified by the National Bureau of Economic Research. A CFNAI-MA3 value below -0.70 following a period of economic expansion indicates an increasing likelihood that a recession has begun. A CFNAI-MA3 value above -0.70 following a period of economic contraction indicates an increasing likelihood that a recession has ended. A CFNAI-MA3 value above $+0.20$ following a period of economic contraction indicates a significant likelihood that a recession has ended.

CFNAI Diffusion Index, Three-Month Moving Average

Notes: Shading indicates official periods of recession as identified by the National Bureau of Economic Research. The CFNAI Diffusion Index represents the sum of the absolute values of the weights for the underlying indicators whose contribution to the CFNAI is positive in a given month less the sum of the absolute values of the weights for those indicators whose contribution is negative or neutral in a given month. Periods of economic expansion have historically been associated with values of the three-month moving average of the CFNAI Diffusion Index above -0.35 .
