Chicago Fed National Activity Index

Index points to increased economic growth in April

Led by improvements in production-related indicators, the Chicago Fed National Activity Index (CFNAI) rose to +0.49 in April from +0.07 in March. Two of the four broad categories of indicators that make up the index increased from March, and only one category made a negative contribution to the index in April. The index’s three-month moving average, CFNAI-MA3, increased to +0.23 in April from a neutral reading in March.

The CFNAI Diffusion Index, which is also a three-month moving average, moved to +0.16 in April from +0.06 in March. Forty-six of the 85 individual indicators made positive contributions to the CFNAI in April, while 39 made negative contributions. Forty indicators improved from March to April, while 44 indicators deteriorated and one was unchanged. Of the indicators that improved, nine made negative contributions.

The next CFNAI will be released:
June 26, 2017
8:30 am Eastern Time
7:30 am Central Time

FEDERAL RESERVE BANK
OF CHICAGO
The contribution from production-related indicators to the CFNAI rose to +0.46 in April from +0.01 in March. Total industrial production increased 1.0 percent in April after moving up 0.4 percent in March, and manufacturing production increased 1.0 percent in April after decreasing 0.4 percent in the previous month. The sales, orders, and inventories category made a neutral contribution to the CFNAI in April, down from +0.07 in March.

Employment-related indicators contributed +0.10 to the CFNAI in April, up from +0.05 in March. Nonfarm payrolls rose by 211,000 in April after increasing by 79,000 in March. The civilian unemployment rate ticked down to 4.4 percent in April from 4.5 percent in the previous month.

The contribution of the personal consumption and housing category to the CFNAI ticked down to −0.08 in April from −0.06 in March. Housing starts decreased to 1,172,000 annualized units in April from 1,203,000 in March, and housing permits decreased to 1,229,000 annualized units in April from 1,260,000 in the previous month.

The CFNAI was constructed using data available as of May 18, 2017. At that time, April data for 51 of the 85 indicators had been published. For all missing data, estimates were used in constructing the index. The March monthly index value was revised to +0.07 from an initial estimate of +0.08, and the February monthly index value was revised to +0.15 from last month’s estimate of +0.27. Revisions to the monthly index value can be attributed to two main factors: revisions in previously published data and differences between the estimates of previously unavailable data and subsequently published data. The revision to the March monthly index value was primarily due to the former, while the revision to the February monthly index value was primarily due to the latter.

**CFNAI-MA3 and Inflation Cycles**

Notes: Shading represents periods of sustained increasing inflation. An increasing likelihood of a period of sustained increasing inflation has historically been associated with values of the CFNAI-MA3 above +0.70 more than two years into an economic expansion. Similarly, a substantial likelihood of a period of sustained increasing inflation has historically been associated with values of the CFNAI-MA3 above +1.00 more than two years into an economic expansion.

**CFNAI-MA3 and Business Cycles**

Notes: Shading indicates official periods of recession as identified by the National Bureau of Economic Research. Following a period of economic expansion, an increasing likelihood of a recession has historically been associated with a CFNAI-MA3 value below −0.70. Conversely, following a period of economic contraction, an increasing likelihood of an expansion has historically been associated with a CFNAI-MA3 value above −0.70 and a significant likelihood of an expansion has historically been associated with a CFNAI-MA3 value above +0.20.

**CFNAI Diffusion Index**

Notes: Shading indicates official periods of recession as identified by the National Bureau of Economic Research. The CFNAI Diffusion Index represents the three-month moving average of the sum of the absolute values of the weights for the underlying indicators whose contribution to the CFNAI is positive in a given month less the sum of the absolute values of the weights for those indicators whose contribution is negative or neutral in a given month. Periods of economic expansion have historically been associated with values of the CFNAI Diffusion Index above −0.35.

**CFNAI, Monthly Index**

Notes: Shading indicates official periods of recession as identified by the National Bureau of Economic Research. The CFNAI Diffusion Index represents the three-month moving average of the sum of the absolute values of the weights for the underlying indicators whose contribution to the CFNAI is positive in a given month less the sum of the absolute values of the weights for those indicators whose contribution is negative or neutral in a given month. Periods of economic expansion have historically been associated with values of the CFNAI Diffusion Index above −0.35.
