### What is the National Activity Index?

The index is a weighted average of 85 indicators of growth in national economic activity drawn from four broad categories of data: 1) production and income; 2) employment, unemployment, and hours; 3) personal consumption and housing; and 4) sales, orders, and inventories.

### Why are there three index values?

Each month, we provide a monthly index (the CFNAI), its three-month moving average, and a diffusion index. Month-to-month movements can be volatile, so the monthly index's three-month moving average, the CFNAI-MA3, provides a more consistent picture of national economic growth. The CFNAI Diffusion Index instead captures the degree to which a change in the monthly index is spread out among its 85 indicators, averaged over a three-month period.

### What do the numbers mean?

A zero value for the monthly index has been associated with the national economy expanding at its historical trend (average) rate of growth; negative values with below-average growth (in standard deviation units); and positive values with above-average growth.

Periods of economic expansion have historically been associated with values of the CFNAI-MA3 above  $-0.70$  and the CFNAI Diffusion Index above  $-0.35$ . Conversely, periods of economic contraction have historically been associated with values of the CFNAI-MA3 below  $-0.70$  and the CFNAI Diffusion Index below  $-0.35$ .

An increasing likelihood of a period of sustained increasing inflation has historically been associated with values of the CFNAI-MA3 above  $+0.70$  more than two years into an economic expansion. Similarly, a substantial likelihood of a period of sustained increasing inflation has historically been associated with values of the CFNAI-MA3 above  $+1.00$  more than two years into an economic expansion.

The next CFNAI will be released:  
October 22, 2018  
8:30 am Eastern Time  
7:30 am Central Time

# Chicago Fed National Activity Index

## Index points to steady economic growth in August

The Chicago Fed National Activity Index (CFNAI) was unchanged at  $+0.18$  in August. Three of the four broad categories of indicators that make up the index increased from July, and two of the four categories made positive contributions to the index in August. The index's three-month moving average, CFNAI-MA3, rose to  $+0.24$  in August from  $+0.02$  in July.

The CFNAI Diffusion Index, which is also a three-month moving average, increased to  $+0.20$  in August from  $+0.09$  in July. Forty-eight of the 85 individual indicators made positive contributions to the CFNAI in August, while 37 made negative contributions. Fifty-four indicators improved from July to August, while 30 indicators deteriorated and one was unchanged. Of the indicators that improved, 18 made negative contributions.

### CFNAI, CFNAI-MA3, and CFNAI Diffusion for the Latest Six Months and Year-Ago Month

	Aug '18	Jul '18	Jun '18	May '18	Apr '18	Mar '18	Aug '17
<b>CFNAI</b>							
Current	+0.18	+0.18	+0.36	-0.49	+0.52	+0.26	-0.08
Previous	N/A	+0.13	+0.48	-0.46	+0.57	+0.26	-0.08
<b>CFNAI-MA3</b>							
Current	+0.24	+0.02	+0.13	+0.10	+0.52	+0.25	-0.05
Previous	N/A	+0.05	+0.20	+0.12	+0.53	+0.25	-0.04
<b>CFNAI Diffusion</b>							
Current	+0.20	+0.09	+0.17	+0.14	+0.30	+0.15	-0.11
Previous	N/A	+0.08	+0.19	+0.15	+0.32	+0.17	-0.11

Current and Previous values reflect index values as of the September 24, 2018, release and August 27, 2018, release, respectively. N/A indicates not applicable.

The contribution from production-related indicators to the CFNAI moved up to +0.16 in August from +0.10 in July. The Institute for Supply Management's Manufacturing Production Index increased to 63.3 in August from 58.5 in July. The sales, orders, and inventories category made a contribution of +0.07 to the CFNAI in August, up from +0.01 in July. The Institute for Supply Management's Manufacturing New Orders Index increased to 65.1 in August from 60.2 in July.

Employment-related indicators contributed -0.01 to the CFNAI in August, down from +0.13 in July. Civilian employment decreased by 423,000 in August after increasing by 389,000 in July. The contribution of the personal consumption and housing category to the CFNAI edged up to -0.04 in August from -0.06 in July. On balance, housing indicators improved slightly from July, pushing up the category's overall contribution in August.

The CFNAI was constructed using data available as of September 20, 2018. At that time, August data for 51 of the 85 indicators had been published. For all missing data, estimates were used in constructing the index. The July monthly index value was revised to +0.18 from an initial estimate of +0.13, and the June monthly index value was revised to +0.36 from last month's estimate of +0.48. Revisions to the monthly index can be attributed to two main factors: revisions in previously published data and differences between the estimates of previously unavailable data and subsequently published data. The revisions to both the July and June monthly index values were primarily due to the former.

### CFNAI-MA3 and Inflation Cycles

Notes: Shading represents periods of sustained increasing inflation. An increasing likelihood of a period of sustained increasing inflation has historically been associated with values of the CFNAI-MA3 above +0.70 more than two years into an economic expansion. Similarly, a substantial likelihood of a period of sustained increasing inflation has historically been associated with values of the CFNAI-MA3 above +1.00 more than two years into an economic expansion.

### CFNAI-MA3 and Business Cycles

Notes: Shading indicates official periods of recession as identified by the National Bureau of Economic Research. Following a period of economic expansion, an increasing likelihood of a recession has historically been associated with a CFNAI-MA3 value below -0.70. Conversely, following a period of economic contraction, an increasing likelihood of an expansion has historically been associated with a CFNAI-MA3 value above +0.20.

### CFNAI Diffusion Index

Notes: Shading indicates official periods of recession as identified by the National Bureau of Economic Research. The CFNAI Diffusion Index represents the three-month moving average of the sum of the absolute values of the weights for the underlying indicators whose contribution to the CFNAI is positive in a given month less the sum of the absolute values of the weights for those indicators whose contribution is negative or neutral in a given month. Periods of economic expansion have historically been associated with values of the CFNAI Diffusion Index above -0.35.
