What is the National Activity Index?
The index is a weighted average of 85 indicators of growth in national economic activity drawn from four broad categories of data: 1) production and income; 2) employment, unemployment, and hours; 3) personal consumption and housing; and 4) sales, orders, and inventories.

Why are there three index values?
Each month, we provide a monthly index (the CFNAI), its three-month moving average, and a diffusion index. Month-to-month movements can be volatile, so the monthly index’s three-month moving average, the CFNAI-MA3, provides a more consistent picture of national economic growth. The CFNAI Diffusion Index instead captures the degree to which a change in the monthly index is spread out among its 85 indicators, averaged over a three-month period.

What do the numbers mean?
A zero value for the monthly index has been associated with the national economy expanding at its historical trend (average) rate of growth; negative values with below-average growth (in standard deviation units); and positive values with above-average growth. Periods of economic expansion have historically been associated with values of the CFNAI-MA3 above –0.70 and the CFNAI Diffusion Index above –0.35. Conversely, periods of economic contraction have historically been associated with values of the CFNAI-MA3 below –0.70 and the CFNAI Diffusion Index below –0.35. An increasing likelihood of a period of sustained increasing inflation has historically been associated with values of the CFNAI-MA3 above +0.70 more than two years into an economic expansion.

The next CFNAI will be released:

Chicago Fed National Activity Index

Index points to slower economic growth in April

Led by declines in production-related indicators, the Chicago Fed National Activity Index (CFNAI) fell to –0.45 in April from +0.05 in March. Three of the four broad categories of indicators that make up the index decreased from March, and two of the four categories made negative contributions to the index in April. The index’s three-month moving average, CFNAI-MA3, moved down to –0.32 in April from –0.24 in March.

The CFNAI Diffusion Index, which is also a three-month moving average, decreased to –0.22 in April from –0.16 in March. Thirty-three of the 85 individual indicators made positive contributions to the CFNAI in April, while 52 made negative contributions. Thirty-seven indicators improved from March to April, while 48 indicators deteriorated. Of the indicators that improved, 14 made negative contributions.

| CFNAI, CFNAI-MA3, and CFNAI Diffusion for the Latest Six Months and Year-Ago Month |
|-----------------------------------------------|-------------------|------------------|-----------------|-----------------|-----------------|------------------|-----------------|
| Index | Apr ‘19 | Mar ‘19 | Feb ‘19 | Jan ‘19 | Dec ‘18 | Nov ‘18 | Apr ‘18 |
| CFNAI Current | -0.45 | +0.05 | -0.57 | -0.21 | 0.00 | +0.25 | +0.42 |
| Previous | N/A | -0.15 | -0.31 | -0.24 | 0.00 | +0.09 | +0.42 |
| CFNAI-MA3 Current | -0.32 | -0.24 | -0.26 | +0.01 | +0.08 | +0.11 | +0.47 |
| Previous | N/A | -0.24 | -0.18 | +0.01 | +0.09 | +0.12 | +0.47 |
| CFNAI Diffusion Current | -0.22 | -0.16 | -0.16 | +0.10 | +0.17 | +0.15 | +0.33 |
| Previous | N/A | -0.18 | -0.08 | +0.12 | +0.21 | +0.17 | +0.33 |

Current and Previous values reflect index values as of the May 20, 2019, release and April 22, 2019, release, respectively. N/A indicates not applicable.
The contribution from production-related indicators to the CFNAI declined to –0.44 in April from –0.04 in March. Industrial production decreased 0.5 percent in April after increasing 0.2 percent in March. The sales, orders, and inventories category made a contribution of +0.01 to the CFNAI in April, down from +0.06 in March.

Employment-related indicators contributed +0.04 to the CFNAI in April, up slightly from +0.03 in March. The civilian unemployment rate fell to 3.6 percent in April from 3.8 percent in March. The contribution of the personal consumption and housing category to the CFNAI moved down to –0.05 in April from a neutral value in March. On balance, consumption indicators weakened, pushing down the category’s overall contribution in April.

The CFNAI was constructed using data available as of May 16, 2019. At that time, April data for 50 of the 85 indicators had been published. For all missing data, estimates were used in constructing the index. The March monthly index value was revised to +0.05 from an initial estimate of –0.15, and the February monthly index value was revised to –0.57 from last month’s estimate of –0.31. Revisions to the monthly index can be attributed to two main factors: revisions in previously published data and differences between the estimates of previously unavailable data and subsequently published data. The revision to the March monthly index value was primarily due to the latter, while the revision to the February monthly index value was primarily due to the former.

Notes: Shading represents periods of sustained increasing inflation. An increasing likelihood of a period of sustained increasing inflation has historically been associated with values of the CFNAI-MA3 above +0.70 more than two years into an economic expansion. Similarly, a substantial likelihood of a period of sustained increasing inflation has historically been associated with values of the CFNAI-MA3 above +1.00 more than two years into an economic expansion.

Notes: Shading indicates official periods of recession as identified by the National Bureau of Economic Research. Following a period of economic expansion, an increasing likelihood of a recession has historically been associated with a CFNAI-MA3 value below –0.70. Conversely, following a period of economic contraction, an increasing likelihood of an expansion has historically been associated with a CFNAI-MA3 value above –0.70 and a significant likelihood of an expansion has historically been associated with a CFNAI-MA3 value above +0.20.
