What is the National Activity Index?
The index is a weighted average of 85 indicators of growth in national economic activity drawn from four broad categories of data: 1) production and income; 2) employment, unemployment, and hours; 3) personal consumption and housing; and 4) sales, orders, and inventories.

Why are there three index values?
Each month, we provide a monthly index (the CFNAI), its three-month moving average, and a diffusion index. Month-to-month movements can be volatile, so the monthly index’s three-month moving average, the CFNAI-MA3, provides a more consistent picture of national economic growth. The CFNAI Diffusion Index instead captures the degree to which a change in the monthly index is spread out among its 85 indicators, averaged over a three-month period.

What do the numbers mean?
A zero value for the monthly index has been associated with the national economy expanding at its historical trend (average) rate of growth; negative values with below-average growth (in standard deviation units); and positive values with above-average growth.

Periods of economic expansion have historically been associated with values of the CFNAI-MA3 above –0.70 and the CFNAI Diffusion Index above –0.35. Conversely, periods of economic contraction have historically been associated with values of the CFNAI-MA3 below –0.70 and the CFNAI Diffusion Index below –0.35.

An increasing likelihood of a period of sustained increasing inflation has historically been associated with values of the CFNAI-MA3 above +0.70 more than two years into an economic expansion. Similarly, a substantial likelihood of a period of sustained increasing inflation has historically been associated with values of the CFNAI-MA3 above +1.00 more than two years into an economic expansion.

The next CFNAI will be released:
August 24, 2020
8:30 am Eastern Time
7:30 am Central Time

FEDERAL RESERVE BANK
OF CHICAGO
Production-related indicators contributed +2.22 to the CFNAI in June, up from +0.84 in May. Industrial production rose 5.4 percent in June after increasing 1.4 percent in May. The contribution of the sales, orders, and inventories category to the CFNAI moved down to −0.24 in June from +0.04 in May.

Employment-related indicators contributed +1.74 to the CFNAI in June, up slightly from +1.73 in May. Nonfarm payrolls rose by 4.8 million in June after increasing by 2.7 million in May, and initial unemployment insurance claims declined by 849,000 in June after falling by 2.2 million in the previous month. The contribution of the personal consumption and housing category to the CFNAI decreased to +0.40 in June from +0.89 in May.

The CFNAI was constructed using data available as of July 20, 2020. At that time, June data for 50 of the 85 indicators had been published. For all missing data, estimates were used in constructing the index. The May monthly index value was revised to +3.50 from an initial estimate of +2.61, and the April monthly index value was revised to −18.09 from last month’s estimate of −17.89. Revisions to the monthly index can be attributed to two main factors: revisions in previously published data and differences between the estimates of previously unavailable data and subsequently published data. The revisions to both the May and April monthly index values were primarily due to the latter.

Notes: Shading represents periods of sustained increasing inflation. An increasing likelihood of a period of sustained increasing inflation has historically been associated with values of the CFNAI-MA3 above +0.70 more than two years into an economic expansion. Similarly, a substantial likelihood of a period of sustained increasing inflation has historically been associated with values of the CFNAI-MA3 above +1.00 more than two years into an economic expansion.

Notes: Shading indicates official periods of recession as identified by the National Bureau of Economic Research; the vertical line indicates the most recent business cycle peak. Following a period of economic expansion, an increasing likelihood of a recession has historically been associated with a CFNAI-MA3 value below −0.70. Conversely, following a period of economic contraction, an increasing likelihood of an expansion has historically been associated with a CFNAI-MA3 value above −0.70 and a significant likelihood of an expansion has historically been associated with a CFNAI-MA3 value above +0.20.

Notes: Shading indicates official periods of recession as identified by the National Bureau of Economic Research; the vertical line indicates the most recent business cycle peak. Following a period of economic expansion, an increasing likelihood of a recession has historically been associated with a CFNAI-MA3 value below −0.70. Conversely, following a period of economic contraction, an increasing likelihood of an expansion has historically been associated with a CFNAI-MA3 value above −0.70 and a significant likelihood of an expansion has historically been associated with a CFNAI-MA3 value above +0.20.
