Survey shows growth slowed in October and early November

The Chicago Fed Survey of Business Conditions (CFSBC) Activity Index decreased to –13 from –6, suggesting that growth in economic activity remained at a modest pace in October and early November. The CFSBC Manufacturing Activity Index moved up to +13 from a neutral reading, while the CFSBC Nonmanufacturing Activity Index declined to –29 from –9.

- Respondents’ outlooks for the U.S. economy for the next six to 12 months improved, and remained optimistic on balance. Respondents with optimistic outlooks highlighted the strong labor market, the potential for federal tax reform, and increased demand for their firms’ products. Respondents with pessimistic outlooks cited elevated policy uncertainty under the current U.S. presidential administration and concerns that the business cycle may be near a peak.

- The pace of current hiring improved slightly, but respondents’ expectations for the pace of hiring over the next six to 12 months decreased. Both indexes remained negative.

- The pace of current capital spending declined, but respondents’ expectations for the pace of capital spending over the next six to 12 months picked up. Both indexes remained negative.

- The wage cost pressures index edged up and moved into positive territory. The nonwage cost pressures index also increased, but remained negative.

Notes: Positive readings of the overall activity index indicate that more respondents reported above-average growth in activity at their respective firms than below-average growth over the past four to six weeks. The manufacturing and nonmanufacturing activity indexes are calculated in a similar manner by dividing survey responses between manufacturing and nonmanufacturing firms. All three indexes are measured in percentage terms, such that if all respondents report above-average growth they will be +100; and, conversely, if all respondents report below-average growth they will be –100 (see the sidebar for further details on the indexes’ construction).
Notes: Positive readings of the current activity, hiring, capital spending, and wage and nonwage cost pressures indexes indicate that more respondents reported above-average growth at their respective firms than below-average growth in current activity, hiring, capital spending, and wage and nonwage cost pressures. Positive readings of the planned hiring and capital spending indexes indicate similar outcomes for questions pertaining to expectations for hiring and capital spending in the next six to 12 months. Positive readings of the outlook index indicate more respondents reported above-average outlooks for the U.S. economy over the next six to 12 months than below-average ones. The bar charts report the percentage of responses for types of occupations currently in demand; reasons for capital spending and its allocation; and sources of increasing wage and nonwage cost pressures. The numbers may add up to more than 100 percent because more than one option can be chosen.
