Midwest Economy Index

Index points to slower Midwest economic growth again in August

The Midwest Economy Index (MEI) decreased to +0.10 in August from +0.30 in July. Contributions to the August MEI from three of the four broad sectors of nonfarm business activity and four of the five Seventh Federal Reserve District states declined from July. The relative MEI ticked up to −0.14 in August from −0.16 in July. Contributions to the August relative MEI from two of the four sectors and two of the five states increased from July.

Notes: The table summarizes the most recent contribution to the MEI and relative MEI by sector and geography. The sectoral (rows) and geographic (columns) contributions may not sum to the index in each time period because of rounding. Manufacturing and construction and mining are composed of production and employment indicators. Services contains only employment indicators, while consumer spending contains employment, unemployment, per capita personal income, and home and retail sales indicators.
The manufacturing sector’s contribution to the MEI moved down to +0.25 in August from +0.34 in July. The pace of manufacturing activity decreased in Illinois, Iowa, Michigan, and Wisconsin, but was unchanged in Indiana. Manufacturing’s contribution to the relative MEI ticked up to +0.25 in August from +0.24 in July.

The construction and mining sector’s contribution to the MEI edged down to –0.09 in August from –0.06 in July. The pace of construction and mining activity was slower in Indiana, Michigan, and Wisconsin, but higher in Illinois and unchanged in Iowa. Construction and mining made a contribution of –0.11 to the relative MEI in August, down from –0.09 in July.

The service sector made a contribution of –0.04 to the MEI in August, up slightly from –0.06 in July. The pace of service sector activity was up in Indiana, Iowa, and Michigan, but down in Wisconsin and unchanged in Illinois. The service sector’s contribution to the relative MEI increased to –0.23 in August from –0.34 in July.

The contribution from consumer spending indicators to the MEI decreased to –0.02 in August from +0.09 in July. Consumer spending indicators were, on balance, down in all five Seventh District states. Consumer spending’s contribution to the relative MEI decreased to –0.06 in August from +0.02 in July.

Notes: Both the MEI and the CFNAI-MA3 have been standardized to have a zero mean and are expressed in standard deviation units. MEI values greater than zero indicate growth in Midwest economic activity above its historical trend, and CFNAI-MA3 values greater than zero indicate growth in national economic activity above its historical trend; negative values indicate the opposite. Shading indicates official periods of recession as identified by the National Bureau of Economic Research.

Notes: Both the relative MEI and the CFNAI-MA3 have been standardized to have a zero mean and are expressed in standard deviation units. The relative MEI is constructed from the standardized residuals from linear regressions of each of the 129 MEI indicators on the CFNAI-MA3. Relative MEI values greater than zero indicate that growth in Midwest economic activity is higher on average than would historically be suggested based on the CFNAI-MA3; negative values indicate the opposite. Shading indicates official periods of recession as identified by the National Bureau of Economic Research.
