**Midwest Economy Index**

Index points to slower Midwest economic growth in May

The Midwest Economy Index (MEI) decreased to +0.51 in May from +0.72 in April. Three of the four broad sectors of nonfarm business activity and four of the five Seventh Federal Reserve District states made positive contributions to the MEI in May. The relative MEI moved down to +0.09 in May from +0.65 in April. Three of the four sectors and three of the five states made positive contributions to the relative MEI in May.

### What is the Midwest Economy Index?

The index is a weighted average of 129 state and regional indicators encompassing the entirety of the five states in the Seventh Federal Reserve District (Illinois, Indiana, Iowa, Michigan, and Wisconsin). The index measures growth in nonfarm business activity based on indicators of four broad sectors of the Midwest economy: 1) manufacturing, 2) construction and mining, 3) services, and 4) consumer spending.

### Why are there two index values?

Over long periods, growth in Midwest economic activity has historically tended to coincide with growth in national economic activity. However, over shorter periods of time this has not always been the case. To highlight such differences, we construct two separate index values. The MEI captures both national and regional factors driving Midwest growth, and the relative MEI provides a picture of Midwest growth conditions relative to those of the nation.

### What do the index numbers mean?

A zero value for the MEI has been associated with the Midwest economy expanding at its historical trend (average) rate of growth; positive values with above-average growth (in standard deviation units); and negative values with below-average growth. A zero value for the relative MEI has been associated with the Midwest economy growing at a rate historically consistent with the growth of the national economy; positive values with above-average relative growth (in standard deviation units); and negative values with below-average relative growth.

---

**Notes:**

The map's shading summarizes the most recent contribution to growth in Midwest economic activity from each of the five states in the Seventh Federal Reserve District (Illinois, Indiana, Iowa, Michigan, and Wisconsin).

Notes: The table summarizes the most recent contribution to the MEI and relative MEI by sector and geography. The sectoral (rows) and geographic (columns) contributions may not sum to the index in each time period because of rounding. Manufacturing and construction and mining are composed of production and employment indicators. Services contains only employment indicators, while consumer spending contains employment, unemployment, per capita personal income, and home and retail sales indicators.
The manufacturing sector’s contribution to the MEI decreased to +0.32 in May from +0.37 in April. The pace of manufacturing activity decreased in Indiana, Iowa, and Michigan and was unchanged in Illinois and Wisconsin. Manufacturing’s contribution to the relative MEI decreased to +0.17 in May from +0.28 in April.

The construction and mining sector’s contribution to the MEI decreased to +0.01 in May from +0.10 in April. The pace of construction and mining activity was lower in all five Seventh District states. Construction and mining made a contribution of +0.01 to the relative MEI in May, down from +0.14 in April.

The service sector made a contribution of –0.04 to the MEI in May, down from +0.06 in April. The pace of service sector activity was down in Illinois, Indiana, Iowa, and Wisconsin and unchanged in Michigan. The service sector’s contribution to the relative MEI decreased to –0.22 in May from +0.07 in April.

The contribution from consumer spending indicators to the MEI increased to +0.22 in May from +0.20 in April. Consumer spending indicators were, on balance, up in Indiana, Michigan, and Wisconsin, but down in Illinois and Iowa. Consumer spending’s contribution to the relative MEI decreased to +0.13 in May from +0.15 in April.
