**Midwest Economy Index**

Index points to little change in Midwest economic growth in August

The Midwest Economy Index (MEI) ticked down to +0.42 in August from +0.43 in July. Contributions to the August MEI from one of the four broad sectors of nonfarm business activity and two of the five Seventh Federal Reserve District states decreased from July. The relative MEI rose to +0.28 in August from +0.11 in July. Contributions to the August relative MEI from all four sectors and all five states increased from July.

**MEI and the Seventh Federal Reserve District States**

![Map showing contributions to growth in Midwest economic activity from each of the five states in the Seventh Federal Reserve District.]

Note: The map’s shading summarizes the most recent contribution to growth in Midwest economic activity from each of the five states in the Seventh Federal Reserve District (Illinois, Indiana, Iowa, Michigan, and Wisconsin).

Notes: The table summarizes the most recent contribution to the MEI and relative MEI by sector and geography. The sectoral (rows) and geographic (columns) contributions may not sum to the index in each time period because of rounding. Manufacturing and construction and mining are composed of production and employment indicators. Services contains only employment indicators, while consumer spending contains employment, unemployment, per capita personal income, and home and retail sales indicators.

**What is the Midwest Economy Index?**
The index is a weighted average of 129 state and regional indicators encompassing the entirety of the five states in the Seventh Federal Reserve District (Illinois, Indiana, Iowa, Michigan, and Wisconsin). The index measures growth in nonfarm business activity based on indicators of four broad sectors of the Midwest economy: 1) manufacturing, 2) construction and mining, 3) services, and 4) consumer spending.

**Why are there two index values?**
Over long periods, growth in Midwest economic activity has historically tended to coincide with growth in national economic activity. However, over shorter periods of time this has not always been the case. To highlight such differences, we construct two separate index values. The MEI captures both national and regional factors driving Midwest growth, and the relative MEI provides a picture of Midwest growth conditions relative to those of the nation.

**What do the index numbers mean?**
A zero value for the MEI has been associated with the Midwest economy expanding at its historical trend (average) rate of growth; positive values with above-average growth (in standard deviation units); and negative values with below-average growth. A zero value for the relative MEI has been associated with the Midwest economy growing at a rate historically consistent with the growth of the national economy; positive values with above-average relative growth (in standard deviation units); and negative values with below-average relative growth.

The next MEI will be released:
October 31, 2018
8:30 am Eastern Time
7:30 am Central Time

FEDERAL RESERVE BANK OF CHICAGO
The manufacturing sector’s contribution to the MEI ticked up to +0.39 in August from +0.38 in July. The pace of manufacturing activity increased in Illinois and Iowa, but decreased in Indiana and Wisconsin and was unchanged in Michigan. Manufacturing’s contribution to the relative MEI moved up to +0.35 in August from +0.28 in July.

The construction and mining sector contributed +0.03 to the MEI in August, up slightly from +0.02 in July. The pace of construction and mining activity was faster in Indiana, but slower in Illinois and Iowa and unchanged in Michigan and Wisconsin. The contribution from construction and mining to the relative MEI edged up to +0.07 in August from +0.04 in July.

Consumer spending indicators made a contribution of +0.06 to the MEI in August, down from +0.09 in July. Consumer spending indicators were, on balance, down in Wisconsin, but steady in Illinois, Indiana, Iowa, and Michigan. Consumer spending’s contribution to the relative MEI ticked up to +0.05 in August from +0.04 in July.

Notes: Both the MEI and the CFNAI-MA3 have been standardized to have a zero mean and are expressed in standard deviation units. MEI values greater than zero point to growth in Midwest economic activity above its historical trend, and CFNAI-MA3 values greater than zero point to growth in national economic activity above its historical trend; negative values suggest the opposite. Shading indicates official periods of recession as identified by the National Bureau of Economic Research.
